## Next Club Xeeting

## Wednesday, April 14, 2010

Royal Alberta Museum 12845-102 Avenue
Meeting starts 7:30pm

* 18:30-19:30 hrs - presenter: Marc Bink
- topic: grading of Canadian decimal coins - part III
* 19:30 hrs - club matters -
- executive report to members
- members bring up any issues / questions / concerns
* Refreshments
* Door prizes draw
* Silent Auction
* Presentation: "Some Napoleon Medals"
- presenter Bill Demontigny
* Show and Tell - members are encouraged to bring any numismatic items to show to club members

For more information regarding these events, please send an email to editor_ens@yahoo.ca

Despite the recession, numismatics is still a popular hobby, as proven by yet another successful show. Thank you to all of the members and all of the volunteers. We continue to be a vibrant exciting club.

I've had a chance to travel a little more this year and it continues to amaze me that Edmonton can consistently put on a show that rivals some of the largest in Canada for attendance and surpasses them all in hospitality.

I hope to see everyone out at this month's meeting. We now have a venue set for our annual club sponsored BBQ, to be held on June 19, 2010. Mark this day in your calendar. As soon as more details are available we will provide them to you. I hope to see you all there for good food and good times.

## Cheers,

## David Peter, President ENS

## Albout Your Society

Prior to the meeting, a workshop on "Basics of Canadian Coin Grading, G4 - EF40" was given by Marc Bink. This workshop was open to all members and was the second instalment on Canadian decimal grading. The workshops have been great successes and very well attended.

March 10, 2010 meeting was opened at 7:30 pm by President, David Peter. He gave a heartfelt thank you to all the volunteers who gave their time to help make the Spring Edmonton Money Show a success. He received many comments from dealers and attendees that the show was well run, and this was mainly due to the volunteers.

Marc Bink also thanked the volunteers. The set-up and tear down went very well. He thanked Jamie Horkulak for making the electrical system a few shows ago. This has greatly helped the club and volunteers to set up and provide lighting to all tables without the worry of blowing circuits.

Terry Cheesman gave a presentation on coins of Aurelianus, "On the Road to Recovery".
After the coffee break the door prizes were drawn.
A presentation was given by Markus Molenda on "The Many Answers to the Question: What was the First Dollar?"

The silent auction was concluded.
The meeting was then adjourned and members gathered at Boston Pizza on 124st.

## By All Accounts: 75 Years of Central Banking A new exhibition by the Currency Museum of the Bank of Canada

OTTAWA- March 23, 2010, the Currency Museum of the Bank of Canada unveilled
By All Accounts: 75 Years of Central Banking, an exhibition that looks at the Bank and its history from the perspective of outside observers-journalists, cartoonists, headline writers, economists, politicians, gov-ernment-appointed commissions, and the Canadian public.

Canada's central bank opened its doors on 11 March 1935, in the midst of the Great Depression. Over the next 75 years, each of the Bank's governors was faced with challenges unique to his times, and each brought experience, expertise and personality to the difficult decisions made for the well-being of Canadians.

By All Accounts: 75 Years of Central Banking gives a fascinating peek into how the events of the 20th and 21st centuries have shaped the Canadian economy. Visitors will learn how the work of the Bank has in the past-and continues-to influence their daily lives.

The exhibition is on display from 11 March to 24 December 2010.
About the Currency Museum
Established in 1980, the Currency Museum is part of the Currency Department of the Bank of Canada. Through its stewardship of Canada's National Currency Collection, the Museum preserves Canada's numismatic heritage and engages visitors with interactive displays about money, the central bank, and the economy.

The Currency Museum is open from Tuesday to Saturday from 10:30 a.m. to $5 \mathrm{p} . \mathrm{m}$. and Sunday from 1 p.m. to 5 p.m. Admission is free.

## FEEL CONFIDENT IN YOUR DECISION TO CONSIGN

Our contracts are based on a simple sales percentage with no hidden fees or sliding scale contracts that may not be in your best interest. When you consign with The Canadian Numismatic Company you become a business partner, the better you do, the better we do. TCNC's low commission coupled with higher selling prices results in more money for you. We also offer free pick up on large collections. We will make the process simple and hassle-free for you.

## THE ABSOLUTE FINEST MARKETING IN NUMISMATIC AUCTIONING.

The Canadian Numismatic Company advertises with full page ads in the Canadian Coin News Journal, different U.S.A. publications, and two web sites. We excite the numismatic collecting market with full colourful catalogues produced. We are proud of our 5,000+ client listing who we stay in touch with via direct mail and email. We attend numismatic shows and utilize our internet site.

TCNC IS DEDICATED TO SELLING numismatics.
TCNC sells thousands of coins, tokens and banknotes per year.
This is our business, our passion, our expertise!

## A Penny's Worth

by Marc Bink

## Fool's Gold

Buyer Beware...

Working the appraisal table at the past 3 Edmonton Money Shows has been for the most part a rewarding experience. I've had to learn a lot about things I don't collect. I had a quick lesson in ICCS graded MS George VI Nickels that I would have called AU. I've been forced to learn things about banknotes that I would have had no idea of beforehand. I've looked at a lot of world coins from strange countries. It's absolutely amazing what some people will bring in the hopes that their inherited prized possessions will be worth something substantial. One person was hoping he would be able to finance his retirement on a pile of common date silver dollars and halves that he brought in a huge duffle bag. Another brought in over $\$ 20,000$ in modern notes. More often than not, most will leave disappointed, finding out that they have some pretty common bullion-grade silver or some worn out old change. They are shocked to learn that in the coin world a 40-year-old coin is not considered old. They are floored when they find out what they can expect a dealer to offer them for their material. Then there are those few gems that walk in, like the one AU-55 1948 Dollar or a full set of 1935 Dominion notes that someone brought in to me to evaluate, that make it all worthwhile. The odd time, however, people come in with coins or sets proudly purchased at a premium on TV or online that are truly worthless, and in some cases bordering on outright fraud. And I have to be the one to tell them that they've been had. Not a great way to encourage a potential collector, is it?

One such coin is the "gold" Reichsmark that is currently being offered on-line through a couple
of on-line auction servers. The pitch usually begins with "HITLER'S GOLD" and offers what appears to be a golden 2 or 5 Reichsmark coin encapsulated in protective plastic. This "treasured family heirloom" is advertised as a " 24 Karat Gold Plated Coin" in "top condition". It sells for anywhere from \$20 to $\$ 40$, depending on whether the prospective buyer would prefer to take his chances on an auction or "Buy it now". These coins are advertised as "rare", and made from "high grade silver". The truth of the matter is that these coins are neither rare nor made from high-grade silver. They are as common as grass and made from poor-quality silver, the content being only . 625 .

The reason there are so many of these 2 and 5 Reichsmark coins around is because the entire mintage was never recalled into the Reichsbank and melted down during the war. Nickel and brass coins were recalled by the government because they were considered strategic materials. However, bad silver is just that, bad silver. It wasn't worth it then to melt the lot down, and even now, with the higher silver prices, it's still not worth melting these things down. The mintage figures for these coins in their unaltered state were huge; they were replacing an earlier series of larger and better quality silver coinage from the Weimar Republic that was demonetized in 1933. Because they were silver, the general public hoarded them, but when they were demonetized in 1945 they were deemed worthless and left to the pawn and collector market. Even on the black market that was flourishing at the end of the war they had absolutely no value. When Hjalmar Schacht (ex-Nazi Finance Minister) was released from Nuremburg prison in 1948 he was asked to estimate the amount of Reichsmark

Two Reichsmark, Km-93, Germany, 1938 D (Munich mint). This coin is supposedly plated in 24 karat gold. If it is, the plating is awfully thin, and is beginning to wear through in places. After two weeks in my pocket, this coin has not tarnished, but is beginning to show wear again. All the detail is about VF, and the plating covers most of the finer circulation scars.
that would be in circulation. He estimated that there were approximately 70 billion Reichsmark in circulation. Currently on eBay there has to be 69 billion available, mostly in the form of 2 or 5 Reichsmark coins. What's surprising is that the West German government made no attempts to recall these coins and melt them down when they issued their first 5 DM coin in 1951. These newer coins were the same size and specifications as the older Reichsmark series. So the potential number of "survivors" is probably huge. There's also no way of knowing how many of these coins were gilded, or when they were, or who did it either.

This brings us to today, where there are probably 10,000 of these coins on eBay at any given time. All of them advertised as "rare!!" or "swastika coin", and imploring the viewer to "own a piece of the Third Reich", or "get theirs now before they're all gone!" The biggest selling feature is that swastika; it's a known fact within the collectibles business that anything with a swastika on it sells. There must be something romantic about the lure of a "forbidden" symbol of an inherently evil state that some people will shell out money for. Here's where things get dicey; the ads for these coins are not misleading. In fact, they're devoid of any real information that would lead anyone to believe that they are buying a doctored coin. There is no claim of authenticity, except for the fact that the coin has been circulated, and the claim of being actually plated in gold instead of brass is never substantiated. They are cleverly written so that the novice collector will assume he's buying a real piece of history in a highly collectible grade. Some vendors even offer a return policy if the buyer is not completely satisfied. The ads are perfectly legit and not misleading; it's up to the buyer to know if he's being sold a piece of crap and not the vendor to prove it isn't. The funny thing is that people are actually bidding on these things when they could probably obtain a nice high-grade example of the real unaltered coin for less than what they're paying for the gold fake. The coins had always piqued my curiosity but I could never get around the idea of paying real money for what is an essentially worthless coin.

So when I came across one of these gilded Reichsmark at a local antique show, I just had to buy it. It's a 1938 D (Munich mint) 2 Reichsmark coin, which is pretty common and as such, not worth much. The "gold" plating has covered most of the fine circulation scratches, but the detail on the coin would be about VF at best. I paid $\$ 4.00$ for it, which is probably about a dollar or so over melt, so I'm not out much. It's currently out of its protective plastic capsule and in my pocket, and I'm thumbing it to see if there's actually any gold on it. So far the results don't look too promising, it probably will turn out to be a cheap brass plate and turn black. Not too many people are aware that gold does not tarnish. They figure the plastic capsule is to protect it from getting banged up and not to keep it away from the open air that could turn it black. This is something those vendors on eBay who offer uncleaned gold Roman coins also capitalize on. They hope nobody will notice that they're fobbing off common brass coins as "found" gold. Gold is inert and will not react with anything. It comes out of the ground looking as good as it went in, clean and shiny. Brass however, reacts with sulphides and turns black and fills up with crud and will eventually erode away. Chances are good that any gold that was ever found at one of these dig sites was cherry-picked before the vendor got his cache of uncleaned coins, and as a result, there is next
to no potential of finding a rare gold coin in amongst a pile of dirty bronzes.

Marketing is a science; people will buy just about anything if it's presented in the right light to play on an individual's ignorance and greed. These companies pay a lot of good people to make sure that their marketing campaigns are successful, as well as legal; meaning there are usually no statements of fact in them, only insinuations and unsubstantiated opinions.

Other examples of this sort of thing are plentiful. One that comes to mind was an ad that was placed in a national newspaper recently advertising "ballistic blocks" of US dollar coins. The ad extolled the reader to be one of a select few knowledgeable types who can appreciate the investment potential of buying uncirculated rolls of US dollar coins. This ad featured photographs of people lining up in front
of the Treasury building in Washington and armed security guards carefully monitoring shipments of these "rare" coins. The insinuation was that collectors "in the know" were actually fighting each other on the street for access to these things. Fact is they aren't rare at all. They're repackaged "President" series dollars that are available at face value from any bank or outlet of the US Mint. This company that placed the ad was offering them at a premium above face value, implying that demand was high and they've received a one time shipment and that they were generously opening the deal up to select readers. The ad further played on the reader's ignorance by quoting a couple of prices for rare Morgan dollars, implying that these new coins can only appreciate in value to the same extent a Carson City 1878 Morgan did. The truth is of course, these coins will be essentially worthless or will remain at face value for years to come. The packaging may actually detract from the coin's values because they were removed from their original Mint packaging and placed in different containers. This same company, which goes far enough to state on their ads that they are not affiliated with the Treasury Department or the US Mint, also offers a gold coin at a premium. The ad is written to play on a person's fears about the economy. It illustrates how the price of gold has climbed drastically in the past few years, and how it could be undervalued, but it doesn't justify the premium they charge for a small $\$ 5.00$ gold coin that could be purchased at the US Mint for bullion value. They're playing on ignorance and the concept that a little bit of knowledge is dangerous, considering that most of their buyers will have read something in the financial pages about gold, but not enough to know they're being taken in. These are the same people who offered Obama colourized quarters, (consisting of a paper sticker of Obama's effigy stuck to a Statehood quarter) and a Twin Towers bullion commemorative made supposedly from silver that survived the 9-11 attacks in some vault somewhere. Here again, the ads are perfectly legit; they imply nothing, state nothing concrete except an opinion that the world's finances are on the way to hell in a hand-basket and one had better be prepared by buying gold.

A little subtler are the products that are offered on media like the shopping channel or on eBay. These
are items such as banknote collections, nickel collections, penny and stamp collections etc. that are packaged in attractive wall plaques and are featured in "high collectible grade". These are usually offered by some "mint", which is usually a privately owned clearing house and is not affiliated with any government agency. Each comes with its own "Certificate of Authenticity" endorsed by someone who doesn't really exist, or some bogus professor from a mail order school, or the janitor who happened to be the room with a working pen. But people seem to need this sort of reassurance that the goods they laid out hard-earned money for are actually "authentic". This allows them to boast to friends and appear sophisticated in an effort to convince them that they haven't lost their minds. The problem is, anyone can write up an official looking certificate on banknote bond paper complete with seals and control stamps. It's all as worthless as the material they're flogging, but it satisfies the general public's need for expert opinion. The coins one gets are usually a set of heavily circulated stuff that has been laundered or polished to a high sheen, placed in a cheap frame, and marketed as a "treasured family heirloom". One set I saw was a set of Roman coins attractively packaged in their own 4-drawer wooden coin cabinet. The literature that came with it was pretty basic, didn't contain much more information than a school history book would but was pretty to look at. The cabinet looked impressive. It looked like it was made out of real wood. But it was actually made out of particle board with a veneer, and the coins

Tel: (780) 448-5888
were common $4^{\text {th }}$ Century bronzes that they're finding by the pail full in the Balkans. Apparently the whole kit and caboodle was initially priced to sell for over $\$ 2000.00$ ! Realistically, there was maybe $\$ 200.00$ worth of worn-out Constantines in it. In a related case, I've got a 1943 US penny that has been so polished that the zinc coating over the steel was completely removed and the coin is practically blinding to look at. It came in a set of three coins commemorating the war effort in the US during World War II, and was marketed by a certain collector's "mint" that will have to remain nameless. The coins were graded as "BU" on the plastic slab, which I guess stood for "Brutally Used" or "ButtUgly", instead of "Brilliantly Uncirculated". The other two coins were so worn out and highly polished I threw them into change and spent them.

There are countless more examples out there of all shapes and descriptions, but nothing is as onerous as the recent spate of counterfeits coming from China. These are usually marketed online with "copy" all over the coin's image, except when one receives them "copy" is no where to be found on the coin. These coins are very convincing fakes, and in some cases they've even been known to deceive experts at prominent auction houses. While the vendors who sell them as copies are basically doing nothing illegal, (they sell them as copies, and it's stated so in the ads) those who market them as authentic are committing a crime. Lately I've seen quite a few cheap key-date phonies on a few online servers being sold as originals. Recently one of the dealers I know brought some of these coins to a meeting knowing full well that they were counterfeits; - he wanted to see what they were like, and we were all impressed with the quality of them. It took us all a while to figure out that they were counterfeits, and we could see how easily they would deceive a novice collector. Attempts by various law enforcement agencies to shut these counterfeiters down have been hampered by Chinese law, which states that any article manufactured before the Communist Revolution of 1949 is not protected or the copyright is not acknowledged. So the flood is still continuing, and threatening to do damage to the hobby as more people are deceived.

So the bottom line here is "knowledge is power". Know what you're buying. Chances are most experienced collectors already know quite a bit about what they collect. Beginners however, don't. Most of the general public that picks up the odd mint set for their grand-children or inherits a collection from a relative don't have a clue about coins and values, and are easily taken. And yes, there are some long-term collectors out there who

## 2010 Spring Edmonton's Xoney Show

The Spring Edmonton Money show was held at the Mayfield Inn and Suites March $6^{\text {th }}$ and $7^{\text {th }}$. A total of 31 dealers attended and filled up all 60 tables. It was great to see many of the regular dealers and to welcome back a few who have not been able to attend the last couple of shows.

World coins and ancients did quite well and ICCS certified coins were well represented. For those who crave high grade 'red' cents, this was the place to be as there was lots of high mintstate red copper to be found.

The Edmonton Numismatic Society would like to thank all the volunteers who helped with the set-up, during the show, at the registration desk, hospitality suite, free public coin evauluation table and with the tear-down. Without them a show would not be possible. The volunteers were (please accept our apologies if we forgot anyone):

Larry Priestnall, Bill Demontigny, Gillian Berger, Don Griffith, Joe Kennedy, Andy Vanderleest, Jim Vanderleest, Roger Grove, Del Keown, Martin Holzbauer, Greg Wichman, Mitch Goudreau, Zoltan Mihaly, Marv Berger, Bob Fillman, John Callaghan, Pierre Driessen, Marc Bink, Howard Gilbey, Kim Peter, Seymour Neumann, Chris Hale, Tony Peter, David Peter,_Greg Wichman, Jules Rach, Jim Kindrake, Bob and Pat Eriksson, and Nick Wickenden.

A special thanks to John and Howard for their help with the storage and loading/unloading of cases.

Ray Neiman from National Pride Coin and Stamp,

A busy Saturday Bourse.

Edmonton, AB.

Greg Jones from Lighthouse Numismatics, Halifax, N.S.

## 2010 Spring Edmonton's Xloney Show

More bourse action.

Robert Kokotailo from Calgary Coin and Antique, Calgary, AB.

Svetolik Kovacevic from Ancient Numismatic Enterprise (ANE), Toronto, ON.

# Book Review by Sarge Pelletier 

CHORT, J ean-Claude. Le monnayage et les monnaies fautées 1780-2009, $1^{\text {st }}$ ed. Monaco: Éditions Victor Gadoury, 2009.
[French language, fully illustrated in colour, $15 \times 21 \mathrm{~cm}, 432$ pages, hardbound (ISBN 2-906602-37X), €39]

Chort's Le monnayage et les monnaies fautées 1780-2009 (The coining process and error coins 1780-2009) is quite simply an outstanding book!

Jean-Claude Chort's 35-year passion for error coins is evident is this well-organized and welldocumented book. While focusing on French coinage from 1780 to 2009, the information contained in this unique document can easily be applied to all error coins, regardless of their origin.

Chort begins by explaining the coining process from antiquity to today, since one must really understand this process to determine when and what went wrong to create the error coin. Then he proceeds-and this is really the meat, the most important part on this book-into the classification aspects. Indeed, Chort has organized the various errors into four main categories (die/collar; blank/planchet; mounting, adjustment, and feeding; and strike) that are in turn divided into subcategories and sub subcategories. For example:

- 1 - die/collar
- 2 - blank/planchet
o 1 - laminating error
o 2 - blanking error
- 1 - crescent-shaped
- 2 - ellipsoidal
- 3 - sheet edge
- 4 - unpierced Lindauer and État français
- 5 - off-centre hole
- 6 - double hole
- 7 - doubled-cut ring
- 8 - off-centre ring
- 9 - cut ring
o 3 - assembly error
o 4 - plating error

LE MONNAYAGE ET LES
MONNAIES faUtées

- 3 - mounting, adjustment, and feeding
- 4 - strike

So, a coin described as an error code " 223 " is a coin struck on a blank that came from the edge of a sheet of metal. But Chort was not satisfied with just organizing the various types of error, he

explains each sub subcategory using diagrams (that show, for example, how the planchet would have been positioned between the dies) and photos (with enlargements) of actual error pieces.

Following this important chapter he cautions the readers about, and helps them identify, tampered pieces ("false errors"). Finally, he lists various error French pieces and gives an approximate value for each type of error.

This book is an absolute MUST for anyone interested in error pieces or in the coining process. It is highly recommended.

## Rierre Napoléon Breton <br> By Xistch Goudreau

Many of you have probably admired or shown some interest in Canadian tokens at some point or other, while perhaps not actively collecting them. This article's intent is to give you some background on Pierre Napoléon Breton, a renowned early Canadian numismatist and Montreal coin dealer, who has left us with a numbering system that is still extensively used today.
P.N. Breton was born in Montreal, Québec on June 10, 1858. At the age of 15 he was employed in a banking firm which may be where he first developed his interest in numismatics. His favourite series was that of the copper "Bouquet Sou". He later worked at a couple of bookstores beginning in 1875 before setting out on his own in 1889, opening a shop which sold books, numismatic items and knickknacks. Pierre also managed to find the time to get married in 1879 to Marie Louise Lafricain and eventually raise a family of 15 children!

Pierre Napoléon Breton's most famous publication is the bilingual Illustrated History of Coins and Tokens Relating to Canada. It expanded on his Le Collectionneur Illustré Des Monnaies Canadiennes which was published in 1890 but with a different numbering system. This 1894 book has a brief introduction on Wampum, a type of money used by natives followed by Card Money used in New France, before progressing into the catalogue. There are 513 drawings with descriptions in total, commencing at no. 501 which is the extremely rare and famous French 1670 "GLORIAM REGNI TVI DICENT" 15 Sols silver coin. I have no explanation

P.N. Breton Numismatist Token
to offer on why the numbering system does not start at no. 1 like it did in his Le Collectionneur Illustré Des Monnaies Canadiennes. The "North American Token" is the last entry at no. 1013. The final part of the publication has some short biographies of well known Canadian collectors of the late $19^{\text {th }}$ century such as R.W. McLachlan and Gerald E. Hart before concluding with some paper money descriptions.

Another well known Breton publication is the 1912 Popular Illustrated Guide to Canadian Coins, Medals. After a short preface it begins with sketches of medals, starting at no. 1 with a 1693 Louis XIV French medal that was presented to Indian Chiefs. The listings include some French and British medals better known today as "Betts medals", several military, Governor General, and university medals amongst others. This section ends with a Temperance medal at no. 207. The next part of the book retains the images and numbers of his 1894 catalogue of coins and tokens, but like the newly listed medals, they are without descriptions. This does not mean however that there are not any other changes to his earlier work, as demonstrated by the Franco-American jetons (nos. 510-519) which have been expanded with small letters (ie 510a, 510b) to identify the different varieties that exist. Also included throughout the book are
pictures of prominent Canadian numismatists and ends with a table showing prices paid by him for coins and medals.

Those of you who attended the RCNA Convention in Edmonton last summer may perhaps remember the excellent display by Markus Molenda of Breton's Printing Blocks. This featured several of the actual wooden pieces used to make the coin and token illustrations in his books. Another collectable Breton item is his own personal token. Like other prominent numismatists of the time he struck these, also known as "Numismatist's Tokens" or "Personal Cards". The example pictured is from 1891 and is listed as No. 169 in his Popular Illustrated Guide to Canadian Coins, Medals. The reverse depicts Montreal's Chateau de Ramezay which became the home of the "Numismatic and Antiquarian Society of Montreal" in 1895.
P.N. Breton was an outstanding member of the "Numismatic and Antiquarian Society of Montreal" as well as the ANA. He was very active in the 1909 ANA convention in Montreal. He hosted a reception at the St. Lawrence Hall Hotel and on another occasion gave a presentation on the "Bout de I'Isle" toll bridge tokens from the porch of the Hotel Bureau.

Although Pierre Napoléon Breton died over 90 years ago on Nov 10, 1917, he leaves a lasting legacy in Canadian numismatics. The reality that most auction houses even now use Breton numbers instead of the modern Charlton numbering system in their listings, is a testament that P.N. Breton's work is still the benchmark in regards to pre-Confederation Canadian tokens. I would encourage you all to read his publications as they are still available in various reprint editions.

## A Good Decade for Cent Varieties <br> By jow Renneay

The first decade of the 21st Century has been very eventful for collecting Canadian cent varieties. Just by searching through pocket change, we can find about two dozen different major design varieties!

It all starts with the issue of Test Token sets in 1999. In this year the Winnipeg Mint completed a new facility for plating coins. The plating plant is set up to plate coin denominations from 1\$ to \$1. Special processes are used for plating copper, nickel, or brass onto steel blanks. The mint had already been using copper-plated zinc blanks for cents from 1997 to 1999. With the new plating plant, it is now possible for the mint to manufacture their own blanks completely in-house. Copper-plated zinc blanks are obtained from an external supplier.

The Test Token set issued in 1999 included a 1ф cent with a "P" mintmark under the portrait of Queen Elizabeth. There was some discussion (confusion?) about this in the coin collecting community, as worldwide mints usually use mintmarks to indicate where a coin was manufactured. For example, in 1998 a "W" mintmark was added to the obverse of coins in some sets to indicate they came from the Winnipeg mint. Instead, this new " P " mark indicates the composition of the coin. Perhaps the " P " represented a kind of advertising for the mint to help market it's minting capability worldwide.

The year 2000 saw the return of the "W" mintmark to coins in "Uncirculated" coin sets. This coin is minted on a copper-plated zinc blank. All circulation cents in the year 2000 are made of copper-plated zinc.

In 2001, most of the cents are made of copperplated zinc. Coins with a "P" composition mark are found in sets.

The year 2002 was the Golden Jubilee of Queen Elizabeth's ascension to the throne. The Royal Canadian Mint (RCM) celebrated this event by adding a dual date (1952-2002) to the obverse for this year. Some members of the public were thrilled to find what they thought must be rare and valuable "dateless" cents when they saw the reverse design without a date.

There are two varieties found for the year 2002 - one with a "P" composition mark (a

magnetic coin) and one without a "P" composition mark (a nonmagnetic coin).

The year 2003 has four different varieties in circulation. In this year, the queen's portrait is
 changed mid-year from the crowned portrait of the queen (designed by Dora de Pédery Hunt) to an uncrowned portrait (designed by Susanna Blunt). Both portrait styles are minted on either steel or zinc core blanks. Another variety can be found in "Uncirculated" sets from the mint. Cents in the sets have "WP" as a mintmark - oddly combining the mint's location and the coin's composition as one mark. The RCM Annual report for 2003 contains a cent with gold plated leaves. This is a nice looking cent!

## 1ф Major Variety Checklist <br> (bolded items are uncommon)

| $\square$ | 1999 | No "P" |  |
| :--- | :--- | :--- | :--- |
| $\square$ | 1999 | "P" | Issued in test token sets only |
| $\square$ | 2000 | No "P" |  |
| $\square$ | 2000 | "W" | Issued in sets only |
| $\square$ | 2001 | No "P" |  |
| $\square$ | 2001 | "P" | Issued in sets only |
| $\square$ | 2002 | "P" | Date on obverse under Queen |
| $\square$ | 2002 | No "P" | Date on obverse under Queen |
| $\square$ | 2003 | "P" | Crowned Queen's Portrait |
| $\square$ | 2003 | No "P" | Crowned Queen's Portrait |
| $\square$ | 2003 | "P" | Uncrowned Queen's Portrait |
| $\square$ | 2003 | No "P" | Uncrowned Queen's Portrait |
| $\square$ | 2003 | "WP" | Issued in sets only |
| $\square$ | 2003 | Gold plating | Issued in annual report only |
| $\square$ | 2004 | "P" |  |
| $\square$ | 2004 | No "P" |  |
| $\square$ | 2005 | "P" |  |
| $\square$ | 2005 | No "P" |  |
| $\square$ | 2006 | "P" | Magnetic (steel core) |
| $\square$ | 2006 | "P" | Non-magnetic (zinc core) |
| $\square$ | 2006 | No "P" | Non-magnetic (zinc core) |
| $\square$ | $\mathbf{2 0 0 6}$ | No "P" | Magnetic (steel core) |
| $\square$ | 2006 | RCM Logo | Non-magnetic (zinc core) |
| $\square$ | 2006 | RCM Logo | Magnetic (steel core) |
| $\square$ | 2007 | RCM Logo | Non-magnetic (zinc core) |
| $\square$ | 2007 | RCM Logo | Magnetic (steel core) |
| $\square$ | 2008 | RCM Logo | Magnetic (steel core) |
| $\square$ | 2009 | RCM Logo | Non-magnetic (zinc core) |
| $\square$ | 2009 | RCM Logo | Magnetic (steel core) |
| $\square$ | 2010 | RCM Logo | Non-magnetic (zinc core) |
| $\square$ | 2010 | RCM Logo | Magnetic (steel core) |
| $\square$ |  |  |  |
| $\square$ |  |  |  |

The years 2004 and 2005 have cents found with "P" and "No-P" composition mark varieties.
Most 2006 cents are found without a mintmark. A small production of " P " composition marked cents was released. These are harder to find, but not rare. In mid-2006 there was another major change to the design of Canadian coins. The mint replaced the " $P$ " composition mark with a small RCM logo inside a circle. In the past, the RCM stylized-leaf logo had been used on foreign coins made by the RCM, such as for Peso, 100 Peso and 500 Peso coins for the Dominican Republic in the late 1980s. Canadian cents from 2006 onward have the logo on the obverse design. This new design element is the same on both steel and zinc core blanks, so the differentiating between the two is more difficult than when the " $P$ " mark was in use.

Cent coins made with a steel core are attracted to a magnet, whereas cents made with a zinc core are not attracted to a magnet. Having a magnet is now a requirement for cent collectors needing to determine varieties. Some collectors find that the zinc cents have a different luster and lighter color than steel cents. This may be helpful for quick sorting, but a magnet is a better diagnostic tool.

One oddball variety is the 2006 "No-P" cent that is magnetic. It's hard to find \& commands a heavy premium to buy it. Another rare variety is a 2006 cent that has a " P " composition mark but the coin is non-magnetic.

In 2007 most of the cents issued are made of copper-plated steel. Very few copper-plated zinc coins can be found. Both types have the RCM logo on them and are differentiated by being magnetic or non-magnetic.

Cents issued in 2008 are all copper-plated steel coins.
Recently, non-magnetic 2009 cents are showing up in circulation. It appears the RCM minted copper-plated zinc cents late in 2009.

Here we are in a new decade. So far, 2010 cents are being issued in the non-magnetic variety. Judging from past years, there's a good chance we will also see the magnetic variety too. The magnetic variety can already be found in RCM sets. Check your change!

## Bank of Canada to Issue New Bank Notes

As announced in the federal budget, in 2011 the Bank of Canada will begin to issue a new series of bank notes printed on a polymer material. The new notes will incorporate innovative security features to significantly increase their protection against counterfeiting.

The polymer material will last longer than the cotton paper currently in use, resulting in lower overall production costs and reduced environmental impact.

Stay tuned to the next issue of The Planchet for more information on polymer bank notes.

## Ancient/Xiedieval <br> By Terry Cheesman

## A Denarius of Lucius Verus

One of the enjoyable things about going to a local coin show is being able to examine the coins you want to buy in the flesh as it were. Even though close to forty years has made me a good interpreter of photos and more recently computer scans of coins nothing beats being able to look at a coin with the good old eyeball MkI. This is particularly true when you want to upgrade your coin with one of the same type that is better. You get to compare both coins side by side and can far more easily make the decision that the upgrade is worth the effort or that the coin you own can still hold its own and deserves to stay in the collection.
One coin that I did upgrade is this one. The coin is a denarius of Lucius Verus minted circa 163 A.D. On the obverse is the portrait of Verus bareheaded facing right. The legend reads IMP. L. VERVS AVG. Thus it would read Imperator Lucius Verus Augustus. Roughly translated the obverse reads Supreme army commander Lucius Verus Emperor. The reverse reads PROV. DEOR. TR.P. III COS.II Providentia Deorum Tribunate Potestas III Consul II. Roughly translated the reverse reads , Lucius Verus through the foresight and wisdom of the gods has ruled for three years protecting the common man, and has been the supreme

magistrate twice. One the reverse is the depiction of the goddess Providentia standing left. She is holding a globe and a cornucopia. These represent the rule of the world (the globe) and the wealth and prosperity that that brings, both being due to the wisdom of the gods.
Despite the claims of the coinage Lucius Verus was not one of the better emperors. That title belongs more correctly to his co emperor Marcus Aurelius who became Emperor at the same time he did.
Emperors often found governing the Empire too much for a single individual and occasionally tried a system with two equal co Emperors. In this case the experiment failed.

## L'AI GLON IS BORN part II

Despite his best efforts, Napoléon I's domestic bliss was short lived. Events, especially outside France's borders, began to demand more and more of his attention and ultimately tore his new family and empire apart.
Even before l'Aiglon's birth, all was not well. Resistance to French hegemony was growing throughout Europe. The annexation of territory, creation of new principalities for Napoléon's family and officials, the deposing of ruling dynasties, the exacting of tribute and forced loans, the billeting of French troops in and the forced service of troops from client states, caused increasing resentment.
The situation in the Iberian peninsula became increasingly desperate. What had seemed an easy annexation of the kingdoms of Portugal and Spain had developed into a savage guerrilla war, swallowing ever larger numbers of French troops.
On the economic front, the Continental System an attempt at a Europe wide commercial blockade of Britain - was very unpopular, ruinousness and virtually impossible to enforce. Its results were falling tax revenues, inflation, widespread smuggling, unemployment, devastation of numerous industries, corruption and the alienation of allied states. To crush resistance, Napoléon adopted increasingly harsh methods; expanding direct French rule and even deposing his brother Louis Napoléon as King of Holland in 1810.
What kept matters under control were the Grande Armée and Napoléon's reputation on the battlefield. Then came the disastrous 1812 Russian campaign.
Napoléon began the campaign with a massive multinational army of over 600,000 men in June 1812. Combat, exhaustion, hunger, disease, desertion, drowning, suicide and ambushes by Cossacks saw to it that by December 1812 fewer than 100,000 survived. Most of these were lesser quality garrison and supply depot troops. The feared Imperial Guard had been reduced to fewer than 1000 men. ${ }^{1}$ The vast majority of battle hardened veterans, especially the NOC's and experienced officer corps, were dead. The Grande Armée's and Napoléon's reputation of invincibility on the battlefield had been permanently shattered. The consequences were immediate, allied and client states defected and took up arms against the French.
Although Napoléon appreciated the scale, he saw it as a setback and began immediate plans to repair the damage by calling up new recruits. He was however much more troubled by General Claude-

François Malet failed coup d'etat of late October. It was not the first conspiracy or attempt on his regime or life, but the nature of this particular one was worrisome. Using a fake report of Napoléon's dead by a cannon ball in front of Moscow and a forged decree calling for a new government - bearing the signatures of many senators, General Augereau and past minister Carnot - the conspirators almost managed to gain control of the Paris garrison. Although control was quickly reestablished, no one had bothered to remember the King of Rome, l'Aiglon, Napoléon's son and heir. After 1812, France was on the defensive, its armies in retreat on all fronts before the combined forces of Russia, Prussia, Britain and their allies. With each setback, more allied and client states defected; even Austria, ruled by Napoléon's father-in-law, declared war on France on 12 August 1813.

Between 16-19 October 1813, the Battle of the Nations (Battle of Leipzig) caused the collapse of French rule east of the Rhine. November 15, 1813 the Dutch revolted and expelled French officials. Between 21-25 December 1813, 200,000 allied troops crossed France's Rhine frontier. Wellington had invaded the south in November from Spain.

above: contemporary print of the King of Rome in his crib with all the trappings and symbols of imperial power. Behind him can be seen the crown, to the left is the eagle, in his hand he holds the chain of office with the Legion d'honneur and the Kingdom of Italy's order of the Iron Crown attached. He rests on the mantle of state, emblazoned with the imperial bees. In the background, through the curtains, you can see the city of Rome.

- 1812 by J.L. Benoist after the portrait by J. Goubaud.

During the 1814 campaign, Napoléon displayed the strategic and tactical brilliance with which had won him an empire. Personally, between February and April 1814, he fought nine battles.

It was all to no avail, he was outnumbered. The allies methodically advanced on Paris. The hearts of many of his marshals were no longer in the fight. They had been broken by the fighting in Spain and Russia. They had grown weary of the never ending fighting and wanted to enjoy the wealth and estates they had accumulated. They had also come to the realization that the ancient dynasties of Europe would never rest as long as Napoleon was a threat. Even certain of Napoléon's family members, such as Murat and Caroline, began to make overtures to the allies, looking for an exit which would safeguard their positions and wealth. Not all shared this belief and some continued to serve loyally.

The French people were exhausted from more than 20 years of almost continuous warfare. They had sacrificed much, including large numbers of their sons. What kept them loyal and continue the struggle was the fear of reprisals from the allies, particularly the Prussians. Allied atrocities and the specter of the return of the Bourbons to the throne also helped to stiffen their resolve. All they had fought for was on the verge of being lost. To them, Napoléon was the better of two evils.

There was a disconnect between many of the Empire's elite, who hoped to come to an accommodation with the allies and which ever regime they installed, and the common people.

The majority of Napoléon's troops, although brave, were little more than raw recruits. He had almost no cavalry, the war horses, lost in Russia, could not be replaced. This prevented him, even when he defeated the allies in battle, from pressing any victory. Supplies and munitions were also scarce. Despite this, Napoléon remained a formidable opponent and inflicted many defeats on the allies.

Although the allies on two separate occasions offered peace, Napoléon did not accept. He could not. He knew that his power and the survival of his dynasty were based upon the force of his person, military reputation and success on the battlefield. The Malet affair of 1812 had demonstrated how precarious his dynasty's position was. He had to continue the fight. His dynasty was very young and did not have the benefits and aura of the long hallowed history and traditions claimed by the Bourbons. Furthermore, the established ruling houses of Europe looked upon him and his family with disdain, even though he had married into their midst. He knew that his position, domestically and internationally, depended upon being victorious.

He did attempt everything possible to keep his wife and son in the minds of the people; to link Marie-Louise and L'Aiglon with the succession. The propaganda purpose of the medal (figure 1) featured on the right is clearly an attempt at this. It links Napoléon and his family with classical antiquity and one of its most powerful legends, the Iliad and the

- figure 1 Departure of the Emperor / Hero
medal below was truck to commemorate and advertise the departure of Napoléon, from his country estate of St. Cloud, in January 1814 to join his troops to defend France from the allied forces which had crossed the eastern frontier.

The propaganda purpose of the medal is to more closely link France and the French people with his dynasty.

above: obverse - Napoléon, facing right, dressed in the uniform of the chasseurs à cheval of the Imperial Guard, the uniform he normally wore daily. Above his head floats a laurel wreath, reminding the people that he has the blessing of heaven and portenting the victories to come. Around the edge are found his titles: EMP. ET ROI. (emperor and king).
below: reverse - Napoléon - dressed in Greek warrior costume signifying the Trojan hero Hector - says goodbye to and places his son into the care of two female figures. The female figure to the left, wearing a crown with a ship (the heraldic arms of the city) represents the city of Paris, while the female figure in the middle, upon whose shoulder the warrior rests his hand, represents Empress Marie-Louise.

41 mm, bronzed copper. References: d'Essling 1434; Bramsen 1333.
epic struggle between the Trojans and the Myceneans. Depicted is Hector, hero and defender of Troy, saying goodbye to his wife Andromache and their son Scamandrius - nicknamed Astyanax, lord of the city, for he was his father's heir apparent. Here Napoléon assumes the mantle of the tragic hero who is the last hope and defense of his nation against the invader and aggressor.
He also gives his son into the keeping of the citizens of Paris and through extension, for Paris is France, the nation and people of France. Napoleon is willing to sacrifice his life, as Hector did, for the welfare and honor of his people. He thus tried to link the fate of France with his own.

As 1814 progressed, despite winning battles, Napoléon's cause grew more and more desperate. Finally faced with the inevitable and the unwillingness of his senior officers to continue the fight, Napoléon abdicated on 11 April 1814 in the Treaty of Fontainebleau. Napoléon hoped that he did so in favor of his son and heir.

This possibility was thwarted by the dealings of his former foreign minister Talleyrand - whom Napoléon had affectionately referred to as: "shit in silk stockings". This master politician tricked Marshal Marmont, who controlled 12,000 French troops around Paris (the largest number in the area), into believing that withdrawing these would allow the French Senate to proclaim Napoléon's son as Emperor Napoléon II. Instead the absence of troops allowed Talleyrand to persuade the Senate to vote in favor of the Bourbon king Louis XVIII.
Upon hearing of this treachery, Marmot said to Marshal Ney: "I would give my right arm to undo what has happened". To which Ney retorted: "Why not your head? It wouldn't be too much". ${ }^{2}$ Napoléon had lost and was exiled to Elba. He would never see his son and wife again.
He repeatedly tried during his exile on Elba to have his wife and son come and live with him, to no avail. Soon after her husband's abdication, MarieLouise had placed her and her son's life under the protection of her father, the emperor of Austria. To gain her compliance, her father and his chief minister Metternich played a double game. They led her to believe that she would eventually be allowed to join her husband on his tiny Mediterranean island kingdom of Elba. Once under their control, both were spirited away to Schönbrunn palace in Vienna.

After this, mother and child were quickly separated. Marie-Louise was made duchess of Parma, Piacenza and Guastalla in Italy, while her son was kept in the gilded prison of Schönbrunn. He lost the names Napoléon and Bonaparte. He was to be known as Francis-Charles, Franz for short. He was to be taught to think of himself as a Hapsburg, not a French prince. Information about and from his father was kept from him. No contact with any Bonapartes.

Following his escape from Elba, landing in the south of France and regaining of power, which began what is known as The Hundred Days (March - June 1815), Napoléon requested his wife and son be reunited with him. This was flatly refused. The allies mobilized and finally defeated him on 18 June 1815 at the Battle of Waterloo.

During his brief regaining of power, Napoléon and his propagandists tried to influence French and perhaps other European public opinion regarding his son. He had several medals issued to this effect.

- figure 2, above:
obverse, left - triple conjoined portrait from left to right of Napoléon, Marie-Loiuse and their son.
reverse, right - the French imperial eagle with a star above its head - alluding to the rising of France. Around the edge Mars 1815 - the month of Napoléon's landing in the south of France, following his escape from Elba. 15mm, bronzed copper.

- figure 3, above:
obverse, same as that of figure 1 on previous page. reverse - Napoléon, dressed in the imperial robes of state, presents his son, also dressed in robes of state, to a classically dressed female figure representing the French nation. The exergue reads: "NAPOLEON DONNE SON FILS A LA FRANCE JUIN MDCCCXV" - 'Napoleon gives his son to France June 1815'
- gilt copper, 41mm - References: d'Essling 1621; Bramsen 1665 variant.
The medal depicted in figure 3, was struck either just before or immediately following Napoléon's second and final abdication of 22 June 1815. It is a further propaganda
attempt to win over public opinion in favour of the succession of his son. Significantly, Marie-Louise is not present on this medal. The nature of MarieLouise's relationship with Napoléon and their son is a matter of heated debate amongst both scholarly and amateur historians. Particularly her actions during the 1814-15 period are controversial. One sees her either as a unfortunate pawn of grand power politics or as someone who cared only about herself. Superficially it seems she abandoned her husband and son. Did she have any choices? The decisions she made, were they forced by circumstances? Did she make the best of a bad situation or choose the easy route?

Figure 4 on the right shows a medal dated 20 June 1815, two days before Napoléon's second abdication. It displays on the obverse the left facing portrait of l'Aiglon, but now he is styled "NAPOLEON II EMP. DES FRANÇAIS" (Napoléon II Emperor of the French), below the truncation is the date $X X$ JUIN MDCCCXV (20 June 1815). This appears to have been an attempt by Napoléon's supporters to make the son co-emperor and thus present the world with a fait accompli, to forestall the second reinstatement of the Bourbons.

What is significant is the fact that Napoléon II, does not have the title ROI (king - of Italy). Furthermore, the laurel wreath of a victorious general has been replaced with a simple band tied at the back. This may have been done to convey the message that Bonaparte dynastic claims would be limited to France and the regime would be a peaceful. Foregoing the militarism of the past.

Following Napoléon's exile to the middle of nowhere on the island of St. Helena, the allied decision about who should rule France was not straight forward. The Bourbon restoration of 1814 had proven highly unpopular with the French. The incompetence and corruption of the government of Louis XVIII had been largely responsible for the ease with which Napoléon was able to reclaim power. Napoléon's cause had many supporters, who continued their campaign for his dynasty. The 5 centimes essai of Napoléon II shown in figure 5 served this purpose.

- figure 4 Declaration of Napoléon II

above: obverse - bust of Napoléon II with a band, tied at the back, encircling his head, facing left. Around the edge is his title: NAPOLEON II EMP. DES FRANÇAIS (emperor of the French). The title of ROI (king) has been dropped, the Kingdom of Italy having been lost.
below: reverse - laurated bust of Napoléon as Augustus, facing right. Around the edge are found his titles: NAPOLEON EMP. ET ROI. (emperor and king).

1619; Bramsen 1662
variant.
figure 5 left - essai of 5 centimes coin of Napoléon II, dated 1816.

After Napoléon's exile to St. Helena and especially following his death on 5 May 1821, his son became the rallying point for resistance to and many conspiracies against the hated French Bourbon monarchy. He became intimately linked with the Napoleonic legend, which became ever more embellished and romanticized with time. Bonapartists looked to him for the realization of their dream - the restoration of the Empire.
This is the reason why Napoléon II was held a virtual prisoner at his grandfather's palace in Vienna. To further complicate matters, there were the issues: what to do with the heir of a deposed, but legitimate monarch and grandson of a current ruling monarch? What position was he told hold? What role, if any was he to play? What to call him? What would happen when he reached the age of majority? Would he become a pretender to the French monarchy? Would he try to regain his father's throne? Killing him was out of the question.

As time passed, more and more measures were taken to ensure that his persona would not pose a threat to the European order the allies had created after their removal of Napoléon.

Until 1818 he was the Prince of Parma, heir presumptive to his mother's estates in Italy. To deny him and his potential supporters having a power base, at the insistence of Metternich (Austria's prime minister), he was disinherited from his mother's duchy of Parma. Instead he was created Duke of Reichstädt, an out of the way, unknown and unimportant Hapsburg estate. To this his Bonaparte grandmother, Mme. Mère, remarked: "Where and what is Reichstädt?" ${ }^{3}$
He also lost the title of Imperial Highness and was instead styled Serene Highness, second in rank to the Imperial Archdukes and Archduchesses of Austria. In titles and estates it was made certain that he did not have any real power.

He developed the typical blond Habsburg features, with a long face. He had a quick mind. Frederick Gentz, chief factotum of Metternich and member of the Austrian cabinet, said that of him:
"If he were given a first-class education, he might well become a man of remarkable distinction, but he is doomed to languish in mediocrity." 4
His health was fragile, the result of tuberculosis contracted while still a boy. He was eventually given a commission in the Austrian army, but never allowed to perform any actual duties; nor was he allowed to visit his mother in Italy. Despite all these measures he remained a threat, especially to the French Bourbons. It has been speculated that several plots had been entertained to assassinate him. If any were ever acted upon is unknown. Bonapartists never gave up hope and agitating, for them Napoléon-Charles-François-Joseph was the

1832, created a ground swell of popular sympathy. It also led to a Bonapartist crisis (see figure 7), until a clear successor to head the cause emerged in Charles-Louis Napoléon Bonaparte, son of Louis Napoléon and Hortense, the future Napoléon III. Numerous commemorative private medals, commemorating his life and death, were struck.
